

Floral emblem of Australia in 1960

# ANIGOZANTHUS

## Kangaroo Paws

Family  
Haemodoraceae

*Anigozanthus manglesii*

# ANIGOZANTHUS

to the tune of La Cucaracha

Presto

Trad.

A musical score for the piece 'Anigozanthus' in 4/4 time, marked 'Presto'. The score is written for voice and piano. The key signature is two sharps (F# and C#). The vocal line begins with the lyrics 'A NI-GO ZAN- THUS' and is marked with a forte 'f' dynamic. The piano accompaniment consists of a simple harmonic pattern in the right hand and a rhythmic bass line in the left hand. A double bar line is present after the first measure of the vocal line.

# Anigozanthus manglesii

11 species in the genus *Anigozanthus*

Found in open forests in South-western Australia

Likes Sandy soil

Flowers from August to November in Australia - In US flowers spring through summer

Has grey-green leaves with hairy green flowers on reddish stems up to 2-1/2 feet tall

# Anigozanthus flavidus

Known as the evergreen or tall kangaroo paw

Has a clump of narrow iris-like leaves

Masses of tubular curved densely hairy flowers usually yellow but can be orange, red, pink or green

Most widely cultivated because it is hardy in many climate zones

Easily grown. Tolerates wet soil. Grows in clay and sand.

Grows well in Southern California

GARDEN TOUR

# Cultivation of Kangaroo Paws

Plant in a sunny and open position in the garden.

Provide excellent drainage.

Provide regular water in dry summer climates, but always with good drainage.

Fertilize, but not heavily, and keep Phosphorus on the low side.

Needs annual clean up: After the flowering period, remove the old leaves down to as low as possible. Fans only flower once and need to be cleaned out at the end of a season. Take care not to damage emerging fans.

# BLACK INK DISEASE

Disease is primarily attributable to fungus, *Altenaria alternata*.

Species of *Anigozanthus* differ in susceptibility— the *anigozanthus manglesii* is usually **KILLED**.

*Anigozanthus flavidus* is highly resistant to black ink disease and also to rust fungus.

Symptoms vary from brown sunken lesions with some chlorosis and a black rim to black lesions.

The stems start to wither and the flowers are destroyed.

Black Ink disease can be confused with blackening on leaf tips or spots on the leaves due to water stress, insect damage, or other environmental stresses.

**Rust**

**Black Ink disease**

in other words....

The moral of the story is...

Don't get ink on your paws. It's hard to get off.
