

Cuttings needed for the Propagation Lab;

We need 50 cuttings from several different plants so that everyone will have quality material materials to work with during the lab. If you have some of these plants and would like to share some cuttings so that everyone can participate, that would be great.

Look for the sign-up sheet in the back of the classroom. Enter the number of cuttings that you will be able to provide. Judy will send out a reminder in the class email that you get before class.

Rose:

Cuttings should be 8" long.

Cut the day before class and wrap them in a damp paper towel.

Labeled with the name of the rose if you can.

Plumeria:

Cuttings should be 8 – 9 inches long.

Cut 4 days before class.

African Violet:

Leaf cuttings - should be cut the day before the class and place in a zip lock bag.

Note the color of the flower if possible.
